5.Design a wireframe for a mobile application that incorporates localization features

using Figma

PROCEDURE:

1. Open Figma and create a new design file.
2. Press F and select a mobile phone frame.
3. Add a title, Local Guide, at the top using the Text tool.
4. Draw a search bar labelled “Search Places”.
5. Draw a large rectangle to represent the map and add a location pin.
6. Add a button labelled Use My Location to indicate GPS-based localization.
7. Add a section called Nearby Places with two or three simple boxes.
8. Add a language selection dropdown with options such as English, Tamil, and Hindi.
9. Create bottom navigation buttons for Home, Map, and Settings.
10. Align the elements neatly and save the design.

OUTPUT:

Result:

A mobile application wireframe incorporating localization features such as GPS-based location detection, nearby places, and language selection was designed using Figma.
