5.Use Figma to simulate a handoff scenario in a mobile network and visualize the

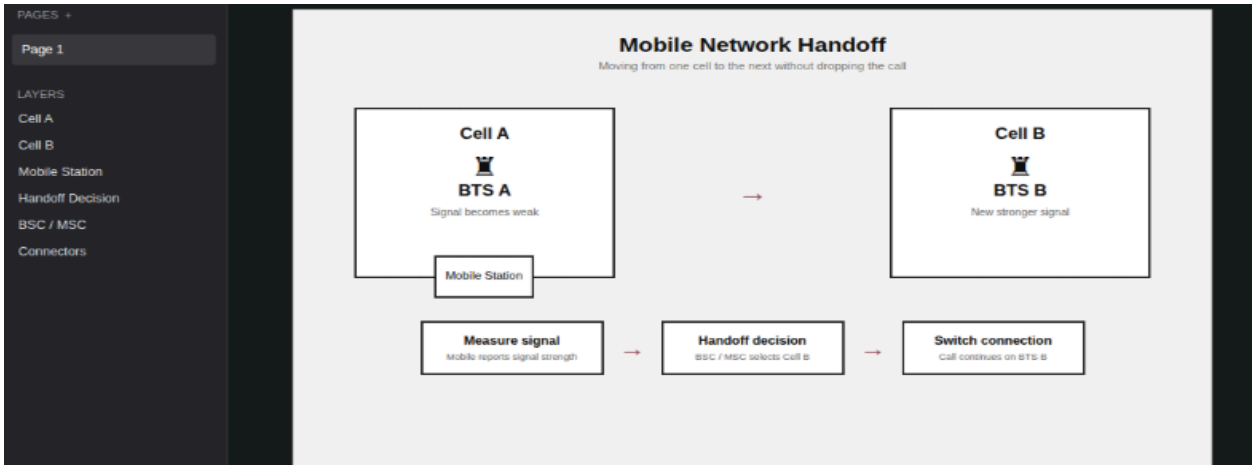

process

PROCEDURE:

1. Open Figma and create a new design file.
2. Create a frame with a light-gray dotted background.
3. Draw a mobile phone icon moving between two cellular towers labelled Base Station 1 (BS1) and Base Station 2 (BS2).
4. Draw circles around each tower to represent its coverage area.
5. Add arrows showing the mobile device moving from BS1 to BS2.
6. Add boxes for the handoff steps: Signal Monitoring → Handoff Decision → Channel Allocation → Connection Transfer → Handoff Complete.
7. Connect the boxes using arrows to indicate the sequence of operations.
8. Use different colors to distinguish the two base stations and highlight the handoff process.
9. Use Figma's Prototype mode to connect the frames and simulate the mobile device switching between base stations.

Preview and save the design.

OUTPUT:

Result:

A handoff process in a mobile network was visualized using Figma, illustrating how a mobile device transfers its active connection from one base station to another while moving between coverage areas.
